

ClinicalOS Enterprise Blueprint (Phases 1 & 2)

Vision

ClinicalOS is a SaaS platform for clinical research operations built around Business Rules, Clinical Intelligence and a Task Center.

Completed Modules

Dashboard; Sites; Users & Roles; Studies; Subjects; Visits & Calendar; Charts & Data Entry; Regulatory; Business Rules; Task Center; Clinical Intelligence; Enterprise Document Center.

Architecture

Multi-company SaaS with Company, Site and Role isolation. Supabase + GitHub + Vercel architecture.

Business Rules

Central engine for visit generation, expirations, priorities and workflow automation.

Clinical Intelligence

Protocol, Regulatory, Subject, Data, Analytics, Executive and Training AI Agents plus Copilot and AI Suggestions.

Security

Role permissions, Site access, Row Level Security, secure documents and Audit Trail.

Analytics

Executive dashboards, clickable KPIs, saved reports and exports.

Frontend

Modern UX with Dashboard, Task Center, Universal Search, Command Palette and Quick Create.

Next Step

Produce the complete technical specification before implementation in Claude.
